Izaz Ahmad (Full Stack Engineer & React Native)

Phone Number | E-mail | Portfolio | Github | Linkedin

SUMMARY:

Full Stack Engineer specializing in the **MERN stack**, with strong expertise in **React, Node.js, AWS, and Redis**. Experienced in building high-performance, scalable applications, including AI-driven platforms for call analytics and omnichannel customer support. Skilled in creating responsive, intuitive, and efficient user interfaces while developing robust backend architectures and cloud-based workflows. Passionate about delivering clean, maintainable code and building modern, user-centric solutions that solve real-world problems.

TECHNICAL SKILLS:

Frontend:
- HTML5, CSS3, JavaScript, TypeScript
- React.js, Next.js, Redux, Tailwind CSS, JSX

Backend:
- Node.js, Express.js, MongoDB, REST APIs
- Redis (caching, queues)

Cloud & DevOps:
- AWS (Lambda, S3, EC2, API Gateway, CloudWatch)
- Vercel, cPanel

Tools & Others:
- Git, GitHub, Postman, WebSockets
- Agile / Scrum workflows

EXPERIENCE:

FULL STACK ENGINEER | NAJOOMI TECHNOLOGIES | [AUGUST 2025] – PRESENT

- Working on building AI-driven customer service agents used by major companies in Pakistan, with support for calls, SMS, voice messages, and image-based interactions.
- Developing and maintaining core application modules using the MERN stack, ensuring scalable and high-performance backend and frontend experiences.
- Implementing cloud-based workflows and microservices using AWS (Lambda, S3, EC2, API Gateway) for reliable and serverless AI agent deployment.
- Optimizing caching, session management, and real-time response handling using Redis, significantly improving system latency and throughput.
- Collaborating closely with ML and DevOps teams to integrate AI models into production, ensuring smooth data flow and highly accurate conversational performance.
- Contributing to sprint planning, architecture discussions, API design, and continuous improvement within an agile development environment.

ASSOCIATE SOFTWARE ENGINEER | METAFRONT LLP | APRIL 2022 - AUGUST 2025 :

- Developed a fully functional React.js application for internet service registration.
- Collaborated with a team to design and implement user interfaces using Tailwind CSS.
- Implemented functionality to download PDFs of property owner information and secure uploading back.
- Worked in an agile environment, contributing to sprint planning, code reviews, and continuous improvement of the application.

INTERN SOFTWARE ENGINEER | HIWIFI | January 2022 - April 2022 :

- Contributed to the DIM Connect project, an application for planning geographical data for an internet-providing company
- We utilized Mapbox and MapLibre for interactive and accurate mapping solutions.
- Developed user interfaces with React, Tailwind CSS, and Mantine UI.
- We integrated RESTful APIs to facilitate seamless data exchange and efficient planning.
- We Assisted in cost calculation and determining optimal cable usage for network deployment.
- Collaborated in an agile development environment, participating in sprint planning, code reviews, and project discussions.

PROJECTS:

XPERIA – AI-Driven Call Analytics Platform:

TECH STACK: MERN, AWS (Lambda, S3, EC2, API Gateway), Redis, WebSockets
- Contributed to the development of Xperia, AI call-analytics platform that evaluates customer calls using Generative AI, Speech Emotion Recognition, and NLP.
- Built modules allowing users to upload call recordings, which the system analyzes to automatically score agents across key parameters like call opening, personalization, empathy, verification, issue diagnosis, and closing.
- Developed scalable REST APIs and automated processing workflows using Node.js, AWS Lambda, and S3, ensuring fast and reliable analysis of large audio files.
- Integrated Redis caching to optimize scoring pipelines, reduce latency, and handle high-volume call uploads efficiently.
- Worked on React-based dashboards for presenting analysis scores, summaries, and agent performance insights in real time.
- Collaborated with AI/ML teams to integrate sentiment analysis models, multilingual transcription, and speech emotion detection into production.
- Helped deliver a fully automated quality assurance experience that reduces operational costs by up to 70%, while giving businesses deeper insights and improved customer service.

QUICKTALK – Autonomous Omnichannel AI Contact Center:

TECH STACK: MERN, AWS (Lambda, S3, API Gateway, EC2), Redis, WebSockets
- Contributed to QuickTalk, a platform that enables businesses to build intelligent, AI agents for customer support across calls, WhatsApp, SMS and more.
- Developed backend services using Node.js, AWS to process uploaded documents, APIs, and more enabling automatic knowledge extraction for agent training.
- Built MERN-based modules that allow users to configure agent behavior, branding, conversation flows, and channel preferences with a smooth UI/UX.
- Implemented scalable pipelines for document parsing, website scraping, and structured knowledge processing, ensuring agents deliver accurate responses.
- Integrated Redis caching to speed up knowledge retrieval and reduce load on AI inference pipelines during high-volume customer interactions.
- Worked on omnichannel deployment workflows, enabling instant publishing of AI agents across multiple platforms with real-time monitoring and analytics.
- Built features supporting inbound call handling, outbound campaign automation, smart callback scheduling, and live agent handoff.
- Collaborated with AI teams to implement NLP, lead generation logic, and mission-based conversation flows for automated sales and support.
- Helped deliver a system that significantly reduces customer support workload while improving response quality, consistency, and lead conversion.

GIGA FIBER :

TECH STACK: JavaScript, React.js, Tailwind CSS, Node.js, PostgreSQL
- Developed a fully functional React.js application for internet service registration.
- Collaborated with a team to design and implement user interfaces using Tailwind CSS.
- Implemented functionality to download PDFs of property owner information and secure uploading back.
- Worked in an agile environment, contributing to sprint planning, code reviews, and continuous improvement of the application.

DIMCONNECT :

TECH STACK: JavaScript, React.js, Tailwind CSS, Node.js, PostgreSQL

● Contributed to the DIM Connect project, an application for planning geographical data for an internet-providing company. ● Utilized Mapbox and MapLibre for interactive and accurate mapping solutions.

● Developed user interfaces with React, Tailwind CSS, and Mantine UI.

● Integrated RESTful APIs to facilitate seamless data exchange and efficient planning.

● Assisted in cost calculation and determining optimal cable usage for network deployment.

● Collaborated in an agile development environment, participating in sprint planning, code reviews, and project discussions.

E-COMMERCE APPLICATION:

TECH STACK: JavaScript, React.js, Bootstrap, Node.js, Express.js

● Planned and designed the ecommerce platform, defining scope and features, and creating wireframes and UI/UX designs.

● Implemented backend infrastructure using Node.js and Express.js, developing RESTful APIs for managing products, orders, and user accounts.

● Developed frontend using React.js and Bootstrap, creating reusable components for product listings, shopping carts, and checkout processes.

● Implemented user authentication and authorization using JWT for secure access to features and user accounts.

● Managed product functionalities including CRUD operations, search, and filtering options for enhanced user experience.

● Designed and integrated shopping cart features with checkout process and payment gateway integration.

● Developed order processing functionalities, including status updates and email notifications for order confirmations.

EDUCATION :

Bachelor of Science in Computer Science

University Of Peshawar, Peshawar Pakistan
2018-2022

LANGUAGES:

English(Professional)
